

Bài 1: Tạo class Animal và class Pig, Dog, Cat

```
Notes  
class Animal {  
    private String ten, mau;  
    Animal() {  
        this.ten = "Animal";  
        this.mau = "Black";  
    }  
    Animal(String ten, String mau) {  
        this.ten = ten;  
        this.mau = mau;  
    }  
    public void setTen(String ten) { this.ten = ten; }  
    public void setMau(String mau) { this.mau = mau; }  
    public String getTen() { return this.ten; }  
    public String getMau() { return this.mau; }  
    public void makeSound() {  
        System.out.println("Tiếng kêu!");  
    }  
    public String toString() { return this.ten + " " + this.mau; }  
}
```

class Pig extends Animal {

private int khailuong;

Pig () {

super ();

this.khailuong = 0;

}

Pig (String ten, String mau, int kl) {

super (ten, mau);

this.khailuong = kl;

}

public void setKhailuong (int kl) { this.khailuong = kl; }

public int getKhailuong () { return this.khailuong; }

@Override

public void makeSound () { System.out.println ("còn lợn"); }

public String toString () { return super.toString () + " " + this.khailuong; }

class Cat extends Animal {

private int tuoi;

Cat () {

super ();

this.tuoi = 0;

}

Cat (String ten, String mau, int tuoi) {

super (ten, mau);

this.tuoi = tuoi;

}

```
public void setTuan(int tuan) { this.tuan = tuan; }
```

```
public int getTuan() { return this.tuan; }
```

@Override

```
public void makeSound() { System.out.println("Meo Meo"); }
```

@Override

```
public String toString() { return super.toString() + " " + this.tuan; }
```

}

```
class Dog extends Animal {
```

```
private int hoiLuong;
```

```
Dog() { this.hoiLuong = 0; super(); }
```

```
Dog(String ten, String mau, int hoiLuong) {
```

```
super(ten, mau);
```

```
this.hoiLuong = hoiLuong;
```

}

```
public void setHoiLuong(int h) { this.hoiLuong = h; }
```

```
public int getHoiLuong() { return this.hoiLuong; }
```

@Override

```
public void makeSound() { System.out.println("Gau Gau"); }
```

@Override

```
public String toString() { return super.toString() + " " + this.hoiLuong; }
```

}

```
public class Test {
```

```
public static void main(String[] args) {
```

```
Animal a = new Dog("Chocan", "Red", 100);
```

```
Animal b = new Cat("Meo mang", "Yellow", 10);
```

```
Animal c = new Pig("Loan", "Pink", 1000);
```

```
a.makeSound();
```

```
b.makeSound();
```

```
c.makeSound();
```
